

Total AKPO

Well Stimulation

Project description

Total Upstream Nigeria (TUPNI) contracted Bourbon Gaia Supply to perform rigless well stimulation operation. The project consisted in deploying a downline from vessel to be connected to the well via XT running tool for chemical injection in the well.

Challenges

In addition to the scope of supply and services, Bourbon had to manage interfaces with SPS and pumping Contractors (OneSubsea and Schlumberger) in order to fit all spread on vessel deck and achieve a complete mobilization as well as a successful offshore operation.

Our solution

Bourbon Gaia Supply provided a packaged solution with project management, engineering and procurement of equipment. The equipment was tested in Onne before the first mobilization onboard the Bourbon Trieste.

Five (5) well stimulation campaigns were performed on AKPO field on two (2) different production wells from July 2015 to October 2017.

■ **Client**
Total Upstream Nigeria

■ **Location**
Nigeria – AKPO Field

■ **Duration**
2014 – 2017

■ **Resources**

- Engineering & Logistics Department
- Bourbon Trieste & Evolution 802

■ **Services**

- Project Management & Engineering
- Vessel
- Procurement (Downline, spooler, chute & interface spread)
- Offshore personnel
- Offshore campaigns
